

Safety Imaging™ Workshop

Preempt Hazard Reporting; Create a Culture of Prevention!

In order to change how people behave in the workplace, they must examine their own habits of mind and patterns of thought. As a targeted intervention, Safety Imaging™ uses visualization to help participants reshape their thought processes to gain greater awareness of what happens before, during, and after a potential incident, including how it might be prevented. The goal is to generate more proactive and constructive behavior in order to prevent real-life incidents from occurring.

Objectives and Outcomes:

- ✓ Raise safety awareness and involve employees in active accident prevention.
- ✓ Understand how Safety Imaging™ differs from a traditional Job Hazard Analysis.
- ✓ Diagnose the cultural factors that can contribute to incidents and accidents.
- ✓ Develop a set of actions to prevent an incident from occurring.

Methodology	Concepts and tools are applied interactively in a group setting.
Workshop Duration	One-day Workshop
Organizational Level	Tailored to a specific site or conducted with a general audience
Intended Participants	All level of employees; especially effective at the workgroup level
Culture Change Experience	Beginner & Intermediate
